

# “Strengthening the ability of health facilities along the Tajikistan-Afghanistan border to deliver care during and after crisis in Tajikistan”

- World Health Organization
- Bordering districts in Khatlon and GBAO
- Government of Japan funded
- Amount of funding: 1,500,000 USD
- Local contribution: NONE
- 2 years; May 2010
- Partners: MoH, local health facilities, CoES

From the People  
of Japan

# Objectives

Strengthen resilience and safety and increase capacity to deliver health care during crisis by hospitals along the border with Afghanistan and

Restore access to health care in the neglected flood damaged southern districts (as part of the 2009 Local Flood Appeal).

# Outcomes

- Detailed vulnerability assessments for fifteen (15) CDH and one Oblast Health facility.
- Detailed immediate and medium term disaster risk reduction plans for sixteen (16) facilities
- 50 Facility managers trained in risk management and public health in emergencies

# Outcomes

- 16 key health facilities able to continue health care delivery during crisis as a result of functional and structural improvements
- Emergency medical supplies available and in place at target facilities
- Restoration of essential medical services to flood affected areas Panj and Kumsangir (ACTED)

# Lessons

- Cost-effective interventions can be made that significantly improve hospital safety and response capacities in disaster in both non-structural and operational areas.
- Local health system managers and staff can be effectively supported in designing innovative and targeted interventions especially suited to their own situation.
- Recovery may be funded within development
